House Awaiting New Roof

House & Grounds Protection Begins

House & Grounds Protection Finished

Shingle Stripping Begins at Peak

Your entire property is protected when we work on your roof.

At Horch Roofing, we understand that putting new shingles on your roof is only part of the job. We keep your home watertight and safe from the moment we begin your roofing project. And we pride ourselves in taking care of your siding, windows, flowers, and deck while ensuring that your home is weathertight for years to come. We are confident that you will be pleased with our services, our stability in the community, our commitment to quality, and our overall customer service.

Waterproof Underlayment Secured

Rainproofing Stripped Roof Sections

Crew Carefully Removes Roof Debris

Debris Removed & Roof Weathertight

Your roof is always weathertight and rainproof.

Weather changes fast in Maine. Until recently, most residential sloped roofs received a layer of asphalt-saturated felt building paper underneath the roofing material. Instead, we use a synthetic underlayment to serve as a secondary weather barrier. This material has better resistance to tearing, moisture, and ultraviolet rays than traditional roofing felt. Your roof is always covered with a protective barrier from start to finish.

Ice & Water Shield on Eaves

Re-Roofing Progresses

Crew Wears Safety Harnesses

Roof Almost Finished

Safety is our number one priority at Horch Roofing.

We hold safety meetings on a monthly basis covering topics such as safe lifting, ladder safety, and fall protection. We require roofers to be harnessed to the roof for all projects, no exceptions. Additionally, we require all ground men to wear hardhats protecting them from possible falling objects. We have had four insurance inspections and one OSHA visit in the past two years and have received positive feedback from each visit. When choosing a roofing company our potential customers should have confidence that when Horch Roofing is on your property our employees and jobsites are safe.

Clean-Up Begins

No Nails or Debris Left Behind

Finished Roof – Architectural Shingles

Protected from the Elements

Our foremen have over 35 years of combined experience.

We take pride in the work we accomplish, holding quality as one of our top priorities. Therefore training is very important to us. We have a "Training Center" in our shop located on Route 90 in Warren. This enables us to teach less experienced employees the proper techniques, the correct application and the tricks of the trade in a controlled environment. After sufficient training, we have confidence that the roofers we send to your project are properly prepared and educated. At Horch Roofing we use the industry's best practices for installing all the important roofing components that help direct water down and away from your home. We only work with quality materials to insure the best looking and most functional roof you can buy.
